

I need some clarification regarding the payout migration process.

From my understanding, the **Total Commission migration file (the company amount-based details file provided by the developer)** contains all commission data. During migration, the commissions are already distributed and stored in the commission history tables (Direct Commission, Level Commission, Company Commission, etc.).

For the payout section, our normal process is based on the commissions received by agents/admin. During the Total Commission migration, I have already prepared the Auto Payout data with:

- Agent Name
- Payable Amount (total commission amount)
- Payment Type
- Bank Details (currently blank)

These values are being populated based on the Total Commission migration data.

The attached screenshots show the flow currently implemented in the development environment:

Total Commission File Import → Commission Distribution → Auto Payout Data Creation

However, I also received a separate **Released Commission file**, and I was informed that this file should be used for the Payout Report.

While testing, I noticed some mismatches between:

1. The commission amounts generated from the Total Commission migration file.
2. The amounts available in the Released Commission file.

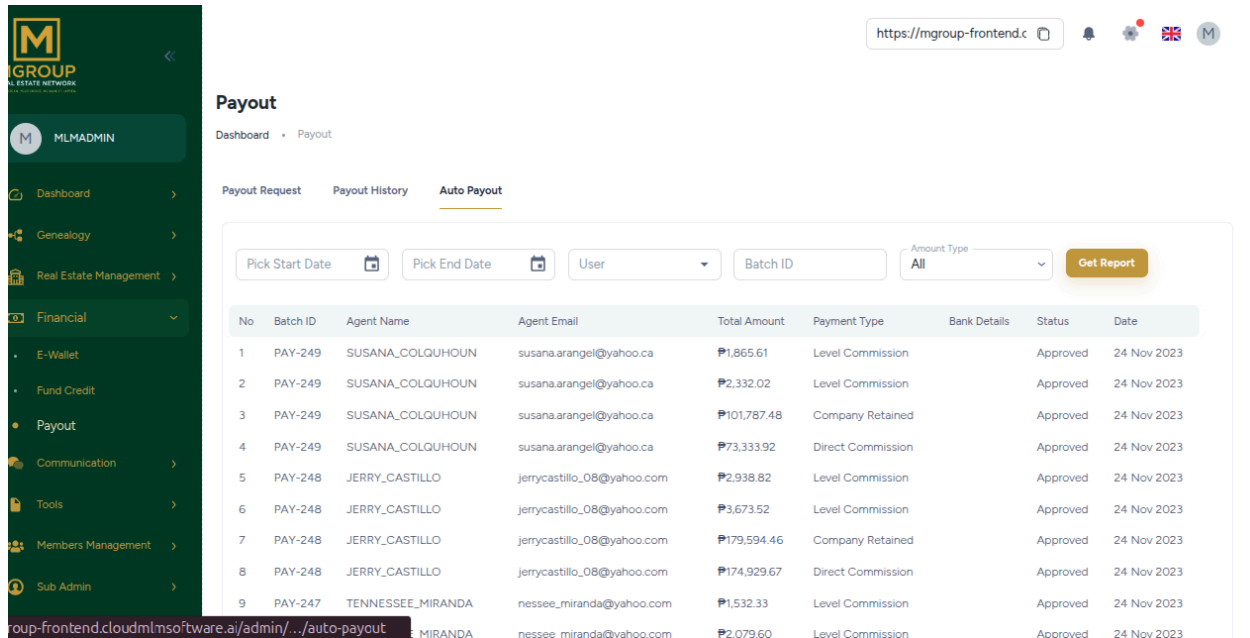

Could you please confirm which approach should be followed?

Option 1: Use only the Total Commission migration file, distribute the commissions during migration, and generate Auto Payout history based on those commission amounts.

Option 2: Use the Released Commission file separately and create Auto Payout history based on the released commission amounts.

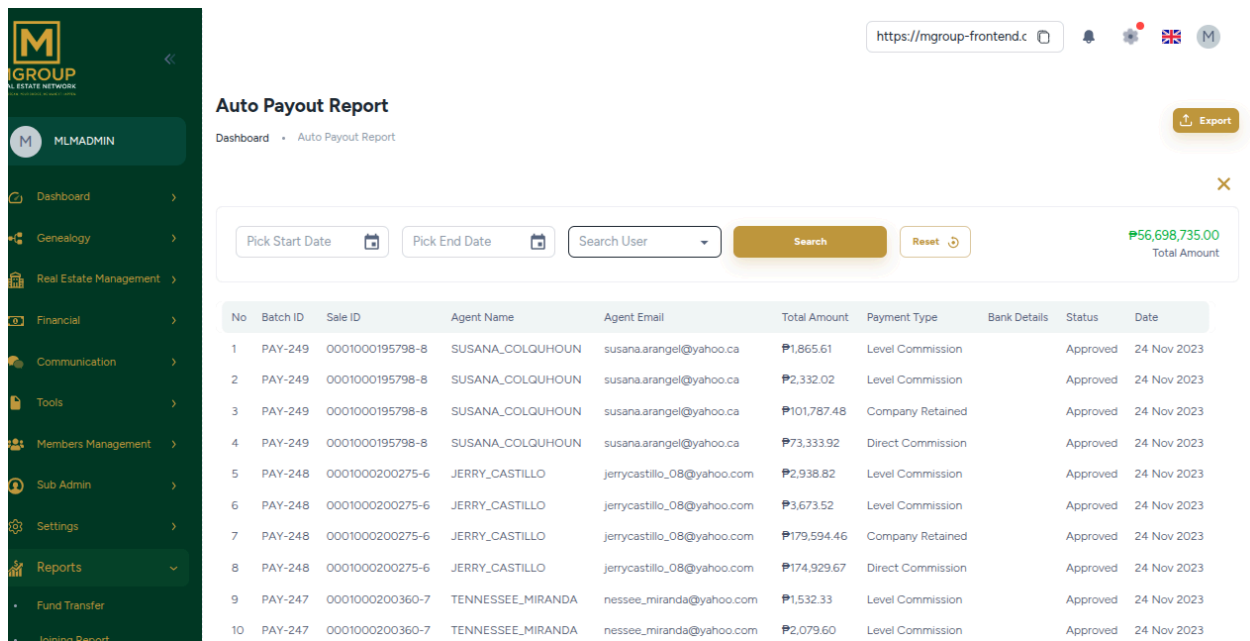

Since both methods produce different payout values, please clarify which source should be considered the correct one for the Auto Payout Report. This will help me proceed with the migration and implementation correctly.

- The attached screenshots indicate the current development implementation, where the **Auto Payout Report** data is generated based on the **Total Commission migration file**. After importing the Total Commission Excel file, the commissions are distributed and the corresponding Auto Payout records are created from that commission data.

The screenshot shows the 'Payout' dashboard with a sidebar menu on the left and a main content area. The main content area has a breadcrumb 'Dashboard > Payout' and a sub-header 'Payout Request Payout History Auto Payout'. Below this is a filter section with 'Pick Start Date', 'Pick End Date', 'User', 'Batch ID', and 'Amount Type' (set to 'All'). A 'Get Report' button is on the right. The main table displays 9 payout records with columns: No, Batch ID, Agent Name, Agent Email, Total Amount, Payment Type, Bank Details, Status, and Date.
