

I have one clarification regarding the **Auto Payout migration**.
In the migration file, I noticed there are two date fields:

- **Check Date**
- **Released Date**

Which one should we use for the **Auto Payout History**?

If we use the **Released Date**, many records are showing **1970-01-01**. Since all users in the migration are registered with the date **15 Mar 2019**, having payout records dated **1970-01-01** doesn't seem consistent.

I also noticed that some Auto Payout records don't have a **Released Date**.

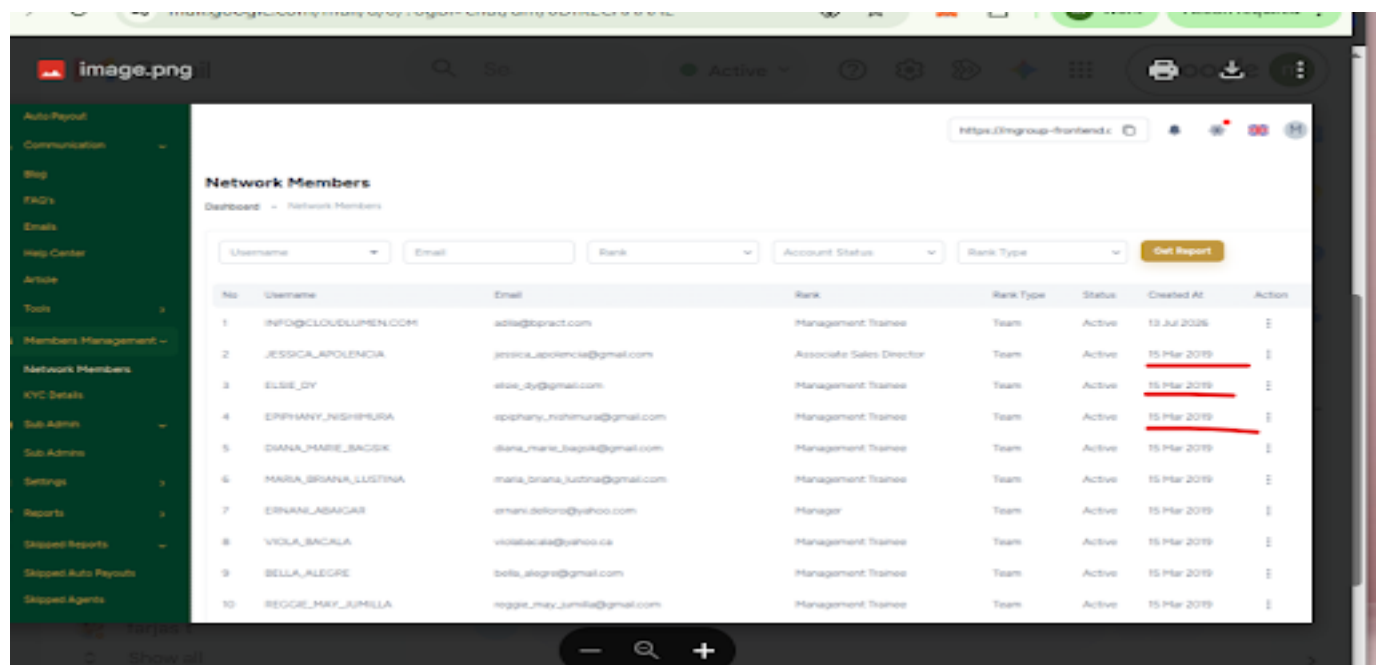

Could you please advise how we should handle these cases? I have two suggestions:

If the Released Date is unavailable, could you please provide a default date that we should use for all Auto Payout records?

Alternatively, could you please update the migration file with the correct Released Dates for all Auto Payout records?

This will help us keep the Auto Payout History accurate and consistent.
